

A unique experience of Command and Control

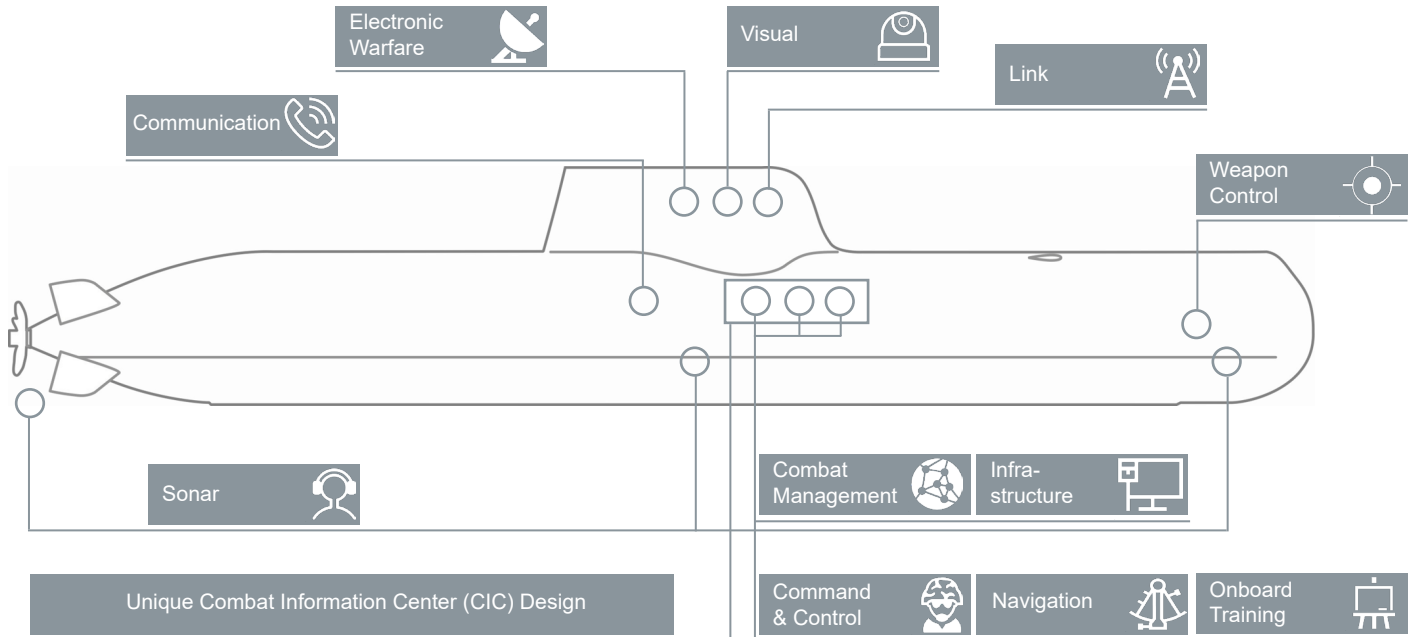

ORCCA

The **ORCCA® Combat System** is an extraordinarily advanced Combat System. This unique and highly integrated system brings an unprecedented technology level to conventional submarine operation. It offers the functionality of interoperability between multi-function consoles from setup to engagement. ORCCA ensures the situational awareness of its operators and command.

12.09.2024

From sensor to shooter – one entire Combat System – designed for thyssenkrupp Marine Systems' submarines

ORCCA® key facts

- All systems are fully integrated in 4th generation Combat System supported by seamless hardware and software interfaces
- Multi-function consoles – all functions / warfighting roles are available at each console (fully integrated CIC)
- Data centre concept for submarines supporting the tactical decision process by the use of artificial intelligence
- Complex data provided to users in the most efficient and user-oriented way → data abstraction in a modern and well known user interface concept
- Resistant IT-Security functionalities
- Scalable for new-builds and refits
- Adaptable to navies' needs / mission profiles

Common look and feel for the complete CIC
